IGSS Dashboard

Speaker Notes

INSIGHT
AND
OVERVIEW

List of topics (IGSS Dashboard)

- The goal of IGSS Dashboard (slide)
- Comparing Dashboards and Diagrams (slide)
- Auto start IGSS Dashboard
- Using IGSS Dashboard
- Configuring dashboards

The goal of the Dashboard

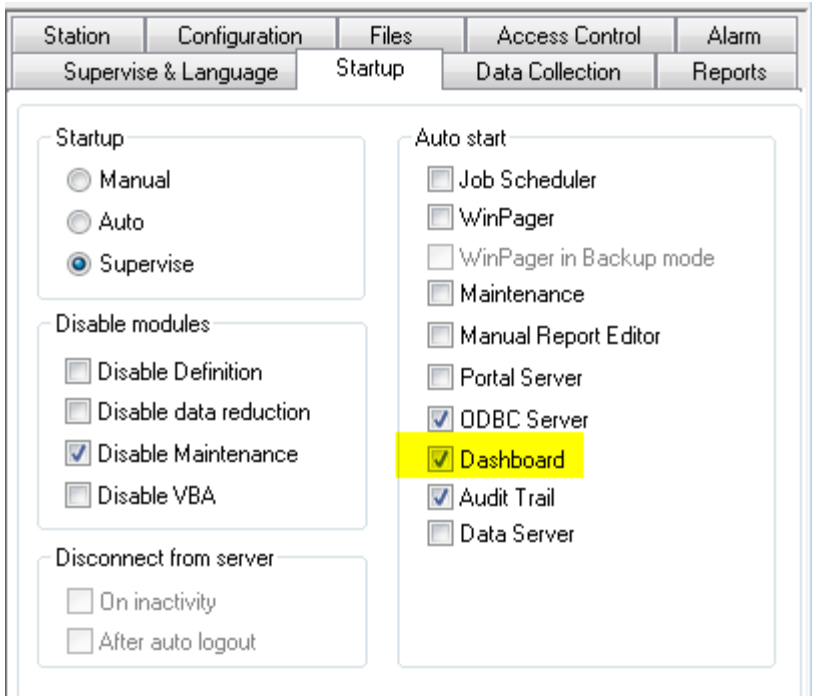

- Quick overview of process status
- Quick overview of key values in the process
- Provide analysis tools for the user to determine corrective action
- Provide dashboards for non-IGSS users
  (The dashboard client only needs an ODBC connection to the server – not charged as an operator station)

Comparing Dashboards and Diagrams

Dashboard	Diagram in Supervise
Focuses on key process values	Focuses on physical process setup
Shaped by users' experience	Shaped by the physical world
Quick overviews	Detailed process diagrams
Combines LOG and BCL values with online values and graphs in one view	Combines online values and graphs (LOG and BCL accessible through Object Historian)
Automatic update of all data types	Automatic update of online values and graphs
Special features in maximized widgets	Same features in normal and maximized view

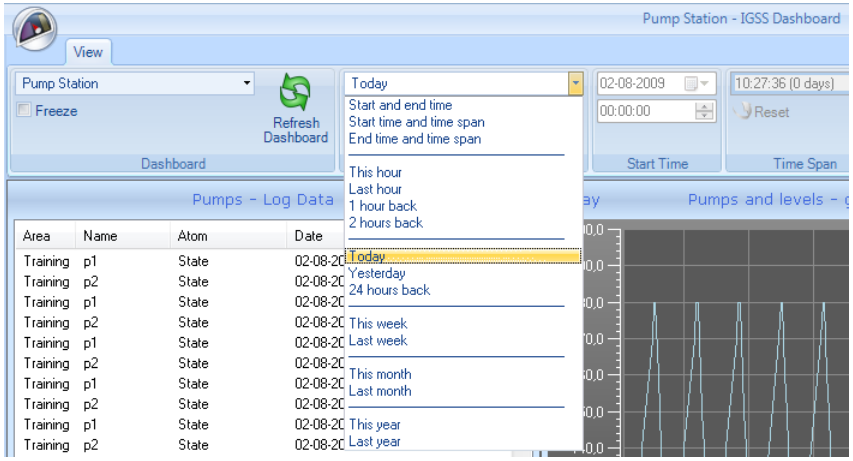

Auto start IGSS Dashboard

1. Open the **System Configuration** module.
2. Click the **Startup** tab.
3. Select the **Dashboard** check box under **Auto start**.

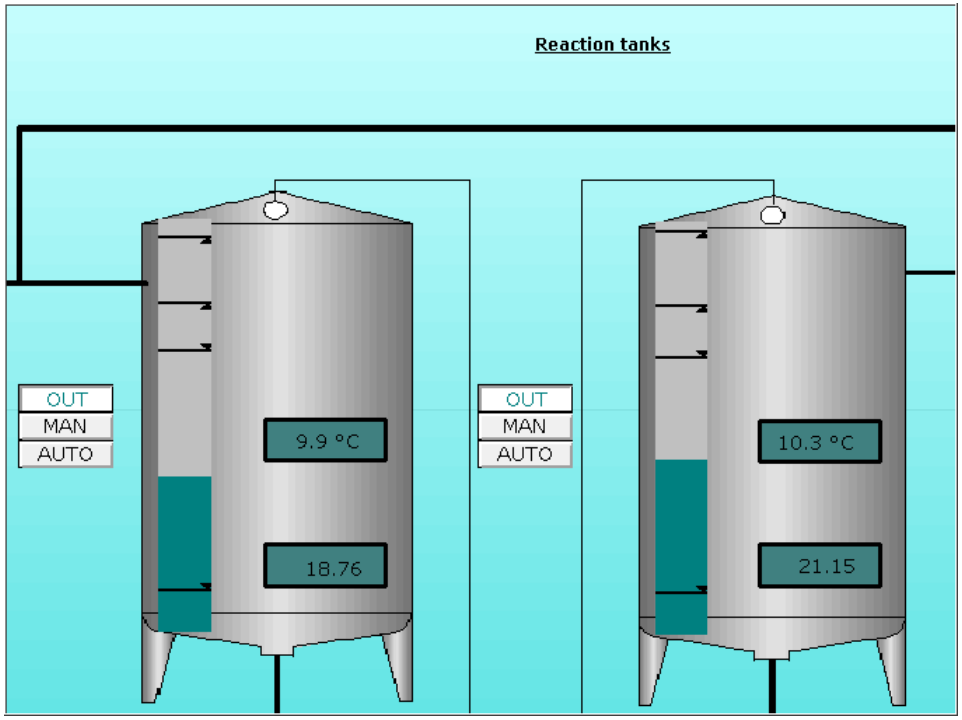

Using IGSS Dashboard

1. Activate the **IGSS Dashboard**.
2. Explain that we have one dashboard – **Pump Station**.
3. Explain what's in the dashboard.
4. Show the **Period** drop-down, explain the items.
5. Double-click the graph widget.
6. Double-click the weather forecast widget.

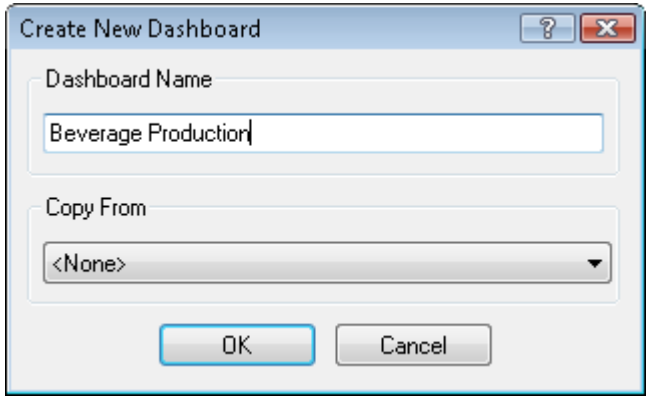

Configuring dashboards (1)

1. Go to **Training** > **More Diagrams** > **Beverage**.
2. Explain that we want a **Beverage Production** dashboard with the flow levels and auto/manual modes.

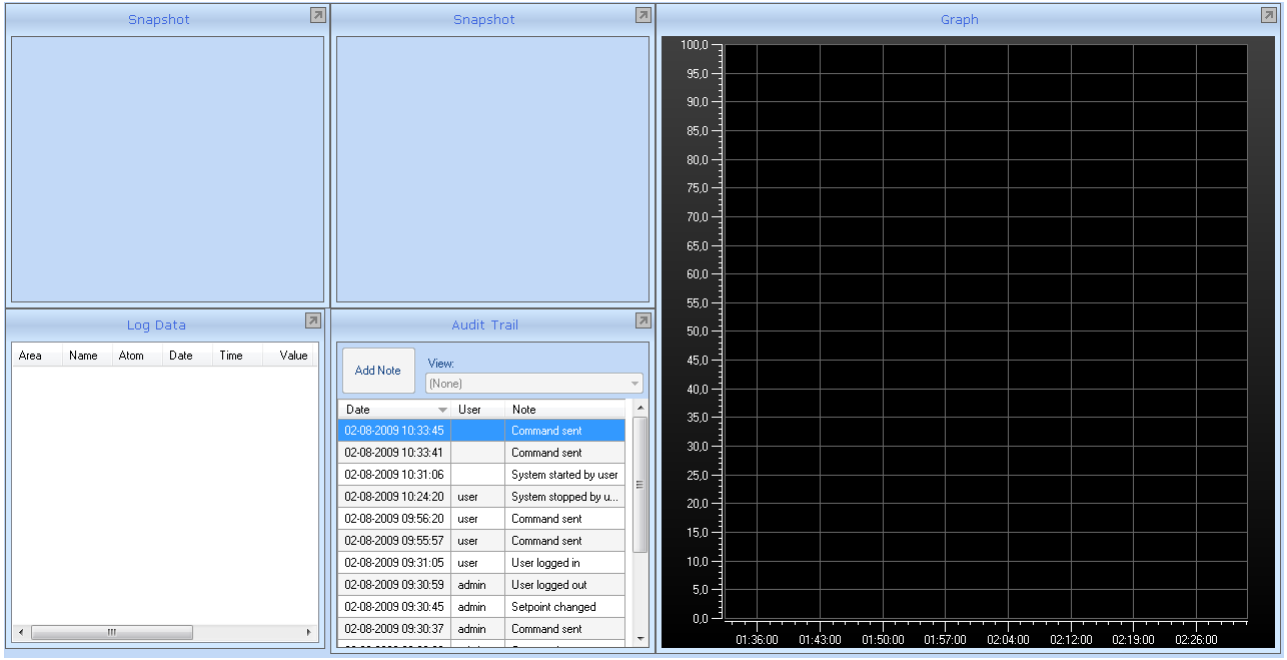

Configuring dashboards (2)

1. Activate **IGSS Dashboard**.
2. Click the **Application button** (doughnut), then select **Configuration mode**.
3. In the **Dashboard** group, click **Add New**.
4. Type the name – **Beverage Production**.

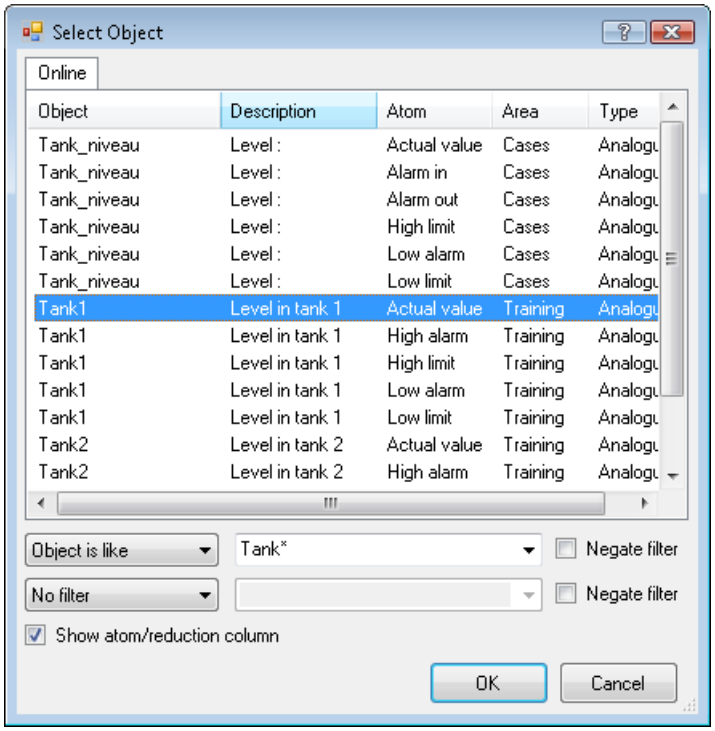

Configuring dashboards (3)

1. Hold down SHIFT and insert these widgets – 2 snapshots, 1 graph, 1 Audit Trail.
2. Set them up as shown below.

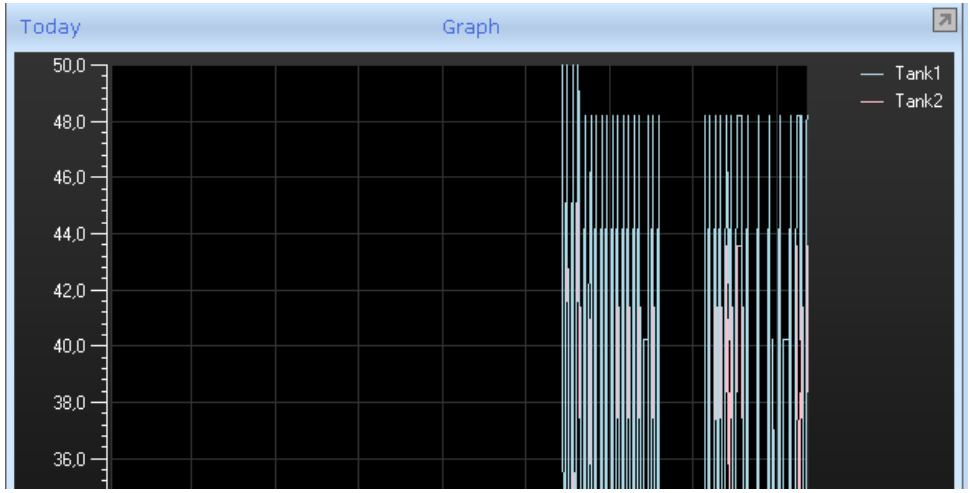

Configuring dashboards (4)

1. First snapshot widget takes Tank1.
2. Second snapshot widget takes Tank2.

Configuring dashboards (5)

1. The graph takes Tank1 and Tank2.
2. The LOG widget takes TANK1AUTO AND TANK2AUTO.

Log Data

Name	Date	Time	Value	Qu
TANK1AUTO	02-08-2009	00:00:05,010	2	
TANK2AUTO	02-08-2009	00:00:05,010	2	
TANK1AUTO	02-08-2009	00:00:18,008	0	
TANK2AUTO	02-08-2009	00:00:19,010	0	
TANK1AUTO	02-08-2009	00:00:33,016	2	
TANK2AUTO	02-08-2009	00:00:33,016	2	
TANK1AUTO	02-08-2009	00:00:46,004	0	
TANK2AUTO	02-08-2009	00:00:47,004	0	
TANK1AUTO	02-08-2009	00:01:01,015	2	
TANK2AUTO	02-08-2009	00:01:01,015	2	
TANK1AUTO	02-08-2009	00:01:14,005	0	
TANK2AUTO	02-08-2009	00:01:15,007	0	
TANK1AUTO	02-08-2009	00:01:29,019	2	
TANK2AUTO	02-08-2009	00:01:29,019	2	
TANK1AUTO	02-08-2009	00:01:42,014	0	

Configuring dashboards (6)

1. Let’s view the final dashboard.
2. Click the **View** tab.
